

National Weather Service Tallahassee, Florida

Significant Event Outlook Severe Thunderstorms on Sunday

4 AM EST Sunday

1

Rain and a few embedded thunderstorms gradually build in from this afternoon into tonight. Severe weather NOT expected.

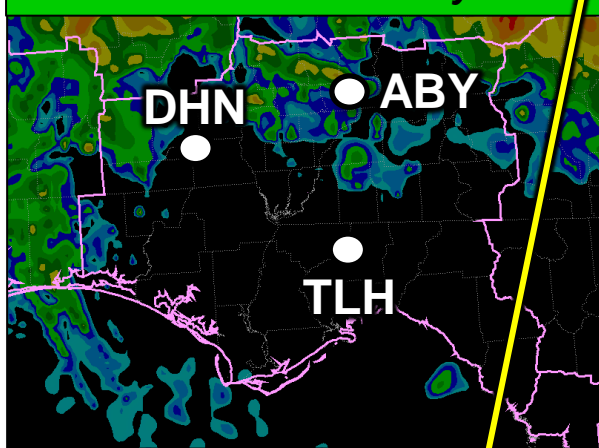

2

Rain generally clears north of the area on Sunday morning with a brief lull possible.

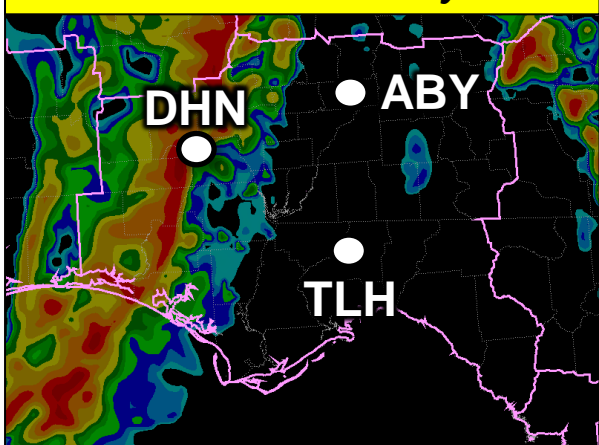

3

A second round of storms arrives from the west. These storms may be severe and should push from west to east across the area.

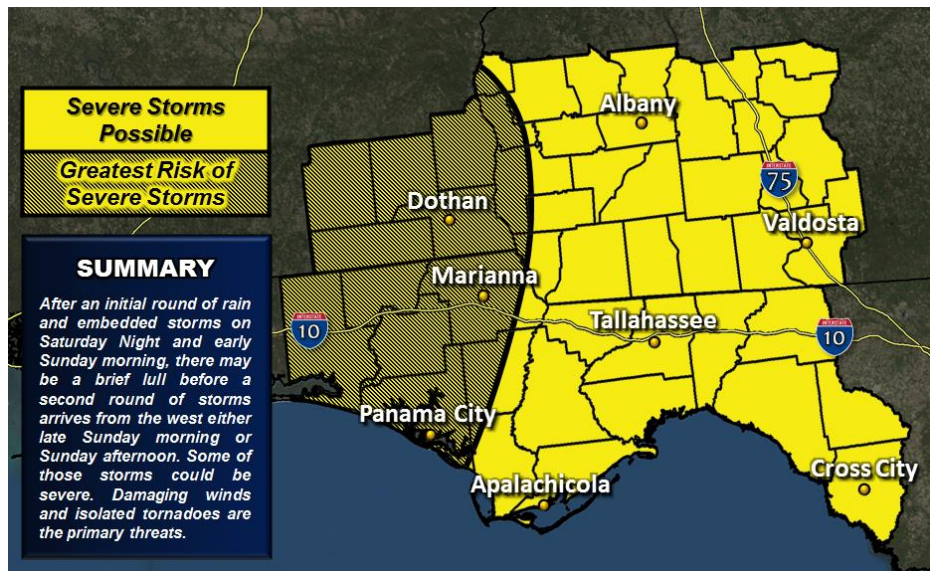

10 AM EST Sunday

3 PM EST Sunday

Severe Weather Risk Area

There will be a risk of severe weather across the entire area on Sunday, but especially over southeast Alabama and the western Florida Panhandle – shown in hatching on the graphic above. Although there may be some thunderstorms in the morning hours on Sunday, **we are expecting the main severe weather threat to arrive in the afternoon** with storms spreading from west to east across the area. The main threats with any severe storm will be damaging winds and isolated tornadoes. We are currently assessing the level of risk to be higher than a typical round of wintertime storms. Therefore, impacts could be a little more widespread or significant than is usual. People should remain weather aware on Sunday and be alert for any warnings.
